

ABSTRACT**COMPACT GOLF BAG**

The compact golf bag (1) incorporates a casing (2) of rigid material and houses on its interior, between its larger and smaller bases, an eccentric cylindrical chamber (6) which, on one side remains near the inside wall of the casing (2) and to which it is attached in at least two attachment points, whereas on the opposite side it remains separated from said wall and with which it defines an intermediate compartment. The casing (2) has an access aperture (7) coinciding with the compartment, provided with a collapsible cover (8) fixed to the casing (2) by means of joint members (9), said cover (8) being provided on its inside wall with pockets (10) which, in the closed position of the aperture (7), occupy the intermediate compartment. On the other hand, the locomotion means (4) and the drive means (5) attached to the casing (2) are collapsible, and are provided with a folding system (11). In addition, the bag comprises a collapsible body (16) with a seat (17) on its upper end.
